Projects Worked

Spam SMS Classification
Minor Project

Creating a machine learning model that detects/ classifies a SMS into SPAM or HAM (normal) based on the textual data using Natural Language Processing. Engineered features like word_count, contains_currency_symbol, and contains_number from the text SMS

Notesforu website – https://notesforu.com/
Educational website

Created an user friendly website to make the availability of old question papers and notes easy to students at our college
